

SOLUTIONS FOR INTERACTIVE MALL ENGAGEMENT

How we can help??

We design custom indoor maps that help customers find stores within the mall easily, thus reducing confusions for them. Our Kiosk App is designed to deliver an engaging experience to the mall visitor. The application will work as a complete mall directory in an interactive way. A Navigation guide will help users identify their favorite places and reach there easily.

The QR-Code based Web app extends the power of the KIOSK APP during these uncertain times to maintain social distancing and keep visitors safe. We ensure to deliver a convenient and safe experience for all, through our services.

Kiosk

Features :

- Interactive indoor map
- Navigation guide to stores and services
- Complete Mall directory
- Events and offers
- Individual Store details
- Category wise search
- Emergency numbers and services guide
- Customer Analytics (User visit based on kiosk Interaction, most searched stores etc.)
- Multiple language support
- Easy to integrate with any existing hardware

Web App

Providing web-link access, users can be conveniently navigated to the map available publicly. This offers the advantage of providing navigation to users without the mobile App as well, ensuring a safe and convenient experience

- One map for mobile users and others
- Map can be made available using web - link or QR code
- A data collection form can be included to help contact tracing during the current COVID-19 pandemic situation

THANK YOU
