WHO WE ARE?

With **UNLTD** as your partner, you will enjoy new possibilities and new innovations that can boost your business onward and upward. **UNLTD** provides the best technology solutions together with consultative expertise to all our customers. We have a vision to equip clients with the state of solution system for a smoother operation and help vanquish competition.

We, create positive solutions, integrating hi-tech security solutions in the hands of skilled and trained professionals to produce a service above and beyond its opponents. **UNLTD** have confidence in delivering a customized solution with the highest quality of service in all aspects of its business operations.

Solutions

At UNLTD, we know how to run a profitable store. We have the knowledge and solutions to solve the problems and challenges retailers face in their everyday work. We know how to lower costs, increase productivity, enhance security and improve the shopping experience in the store.

Believes

We design each solution around your requirements provide on-going personal customer support and technical consultancy. Having built strong partnerships with a network of industry experts and specialist manufacturers we make sure we can bring the right expertise to every situation.

SHELF DISPLAY LABEL

Pricing of products is one of the most labour-intensive activities in the store. In most cases, pricing involves a lot of manual tasks. This makes the process vulnerable to human errors. Various promotions further add to the complex process of pricing. UNLTD is launching a pilot project to replace its in-store paper pricing with Shelf Display Labels. Our customers will benefit from clear and accurate pricing according to our overall business strategy.

To meet customer expectations in today's competitive market, UNLTD makes daily price changes for a selection of items. Currently, these changes are made manually by staff who spend a great deal of time adjusting the prices in the system, printing new labels, and then updating Physically in

the store. Shelf Display Label give you full control on pricing, eliminating all traditional sources of error between the store's cash register system and what is presented in the store. Customers always get the same price on the shelf as at the cash register because the prices on the shelves are obtained directly from the store computer system. This creates safety for you as a retailer, and helps to maintain good customer relations.

How you will Benefit?

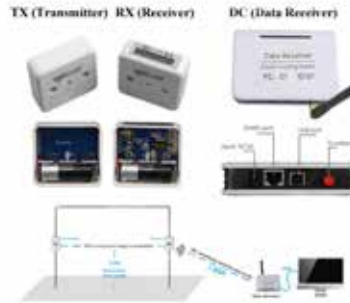

-  Improved Store Operation
-  Increased Productivity
-  Better Shopping experience
-  Optimized space management
-  Future oriented solution

PEOPLE COUNTER

People counter sensor designed for counting people in retail stores where is need to measure visitors traffic. People counting system helps to collect statistics about customers who are visiting stores and display it in various reports per hour, day, week, month and year.

A reliable, easy-to-use and affordable people counting solution that uses infrared technology. This bi-directional wireless people counter is commonly used by retailers, shopping malls, libraries, museums, and casinos to count foot traffic.

How you will Benefit?

-  Calculate your stores conversion ratio
-  Compare store performance across a worldwide network
-  Calculate your footfall patterns
-  Optimise your building layout and staffing levels
-  Improve customer service

RESTAURANT PAGER

When customers check-in let them know their table is ready without interrupting other guests. Simply hand your Guest a Restaurant Pager and allow them to wait in any waiting area, and then page them when their table is ready.

It will help you to Reduce the crowds around the hostess stand. And Locate your guests quickly and immediately, whether your restaurant has a loud or quiet atmosphere.

RESTAURANT CALLING SYSTEM

When customers need an extra drink, the bill, or just have a question, they can use our waiter paging system. Each call button has key or keys which allow the customers to call the staff. When they press the key, it tells the staff they need something or have a question. The 4 keys call button can be customized.

wireless calling system is widely used in the service area, it includes the call button for guests to use and the pager panel receiver for waiters to use. when the guest is in need, he or she just presses the button near him or her and the desk number will be displayed, the waiter gets the message and go to serve the customer.

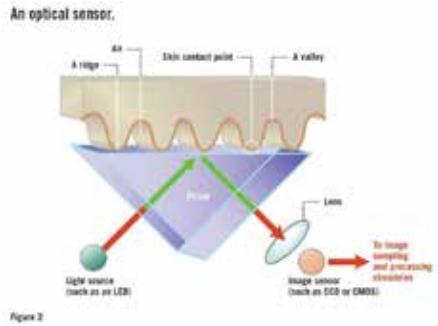

POS

we understand that each business is different. We provide a range of hardware solutions to give you the perfect point of sale till solution for your business. We provide POS card readers, printers, scanners, iPad stands and receipt rolls, so that with the guidance of our support team you can create a bespoke customer bundle to meet your specific business needs.

BIO METRIC ATTENDANCE DEVICES

Compared to traditional way of punching attendance with smart cards, time card sheets, modern offices started using biometric solutions to make the system false proof and to avoid any buddy punching . So Modern time clocking device are mostly are in to Biometric identifications because they are unique for each individual. It is widely accepted in the modern attendance marking solutions. Biometric attendance machines come as fingerprint scanning machine, facial detection device , palm vein readers, iris retina scanners

ANTI THEFT GATE

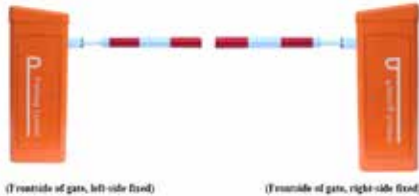

Automatic identification and access control system has become necessary to overcome the security threats faced by many organizations in these days. By installing the system at the entrance will only allow the authorized persons to enter the organization. The system can also be installed at various points inside the organization to track the person's movement and to restrict their access to sensitive areas in the organization. In such a way, suspicious persons can be caught

which will surely improve the security level in the organization. Radio frequency identification (RFID) is a wireless technology that can be used to develop the access control system.

BOOM BARRIER GATE

Our vast range of automatic barriers are designed to meet the needs of any entrance or exit point regardless of the required span. From standard single car park automatic

barriers through to bespoke solutions for larger spaces, we have the automatic barrier to suit. Generally found at private and public car parks, factory checkpoints and entrances to monitored areas such as local authority offices.

The key to successful installation and application comes from making best use of the programmable logic controller as this gives endless flexibility to the overall control of the entire system.

We can give you both sales and pre sales support as a reliable supplier of IP CCTV camera video surveillance system installation and integration in the state of Qatar

PABX

Private Automated Branch Exchange (PABX) is a phone switching system that widely used in offices and plants, allowing a single access number to offer multiple lines to outside callers while providing a range of external lines to internal callers or staff.

UNLTD provides a full range of PABX systems including analog PABX, IP PABX and Hybrid PABX. The IP PABX uses "Voice over Internet Protocol" (VoIP) technology to

transform high speed internet service into a phone line to convert voice into digitized packets and then put the digitized packets onto the data network. It can easily adapt to any business, helping clients increase employees' productivity, improve customer service and reduce cost, bring long term benefits for scalability, manageability and enhanced features.

TOUCH SCREEN DISPLAY

Nowadays, companies began to integrate touch screen technology with dry-erase boards (wall-mounted surfaces that allow the user to write with markers and erase the markings with a cloth). With these devices, whatever a user writes on the board can be simultaneously recorded and saved in a computer file. This is becoming more popular because of its ease of use, proven reliability, expanded functionality and decreasing cost

SOLAR STREET LIGHT & SOLAR SYSTEM

VENDING MACHINE

Automatic regular coffee vending machine including coffee powder or coffee beans, sugar, and milk powder stored in chamber. It also includes the hot water chamber where the water is heated. After giving command through a switch the machine add that specific amount of ingredients in the hot water. And then it gets delivered in the cup. The controlling mechanism like heating is done by the use of microcontroller.

AUGMENTED REALITY / VIRTUAL REALITY / MIXED REALITY

Augmented reality, Virtual reality and Mixed Reality are the new and trending technologies now. We actually need some supporting devices to experience it. Now, these technologies are coming into the smartphones as well. So we can provide the essence of the technology to a wider range of users. Although the wearable devices provide the better experience.

In AR & MR we have devices like Microsoft HoloLens and windows mixed reality devices, on which we can see the real world and bring the digital elements overlay in the real world. For example, we can augment a fully constructed project design over a physical broacher. Or else, we can bring the décor elements right into a real room or living areas.

But in VR the things are really different. The person who experiencing the VR will be completely immersed in a predesigned world as the name signs, a virtual world. And he'll be able to explore that area as he wants. He'll be having full freedom to explore the world. For example, Imagine if one could see the home he dreamed before he physically made it. He can move and explore each and every corner inside and outside of it. He can share his suggestions to the architect. The devices available for experiencing VR is very vast. But the major ones are Oculus Rift, HTC Vive and Samsung GearVR etc. Standalone devices like oculus Go are also available. Both AR & VR can be created and experienced in our smartphone also with some limitations as compared to the wearable devices. But can be provided with better experience with our creative UI and UX concepts.

SONOS SOUNDS SYSTEM

Sonos is the home sound system that delivers all the music on Earth, in every room, with warm, full-bodied sound that's crystal clear at any volume. Sonos can fill

your home with music by combining HiFi sound and rock-solid wireless in a smart system that is easy to set up, control, and expand.

VIRTUAL ASSISTANTS

Virtual assistants are especially in demand by entrepreneurs and online businesses that need help but don't want to bring on staff in their location. However, many small and mid-size businesses use virtual support, especially for specific tasks such as social media management.
